## NOTICE OF LIMITATIONS

This document presents a reconnaissance survey of historical environmental records preserved at the Army Records Center, Presidio of San Francisco. The center is maintained by the National Park Service. The author compiled this data on a volunteer basis as a service to the community. The data in this document is preliminary and subject to verification. Time constraints did not allow a comprehensive survey to be performed. I did not include many historical non-CERCLA documents on asbestos removal, pcb removal, transformers, underground tank removal, or the Letterman Hospital and Public Health Service Hospital complexes in this document. Army personnel indicate that some of the plans listed here may have been proposed but not constructed. Cross-checking of data from different sources is recommended. For example, the basic information maps and quartermaster forms display as-built conditions. These documents can be used to cross-check the building plans. This advisory document is delivered to the Army for environmental cleanup purposes. No warranties are expressed or implied.
